

GATHERING AND PICKING DEVICE

Abstract of the Disclosure

A gathering and picking device comprising a first gathering element that is arranged on a first side of a picking gap and a second gathering element that is arranged on a second side of a picking gap opposite the first gathering element. Both gathering elements are rotated about a predominantly vertical axes and are provided with carrier elements that grasp standing plants. The carrier elements introduce the standing plants into the picking gap and convey the standing plants over at least part of the length of the picking gap.
